

Special Interest Satellite Symposium Proposal

The updated schedule for the new destination was sent to the accepted proposal submitters via email. If you haven't received it, please email ipvc2023@kenes.com.

Special Interest Satellite Symposium Submission is now closed!

Please note that IPVS will welcome suggested sessions for the Conference. Following the deadline, there will be a review process and the Scientific Committee will choose which sessions to include as part of the scientific program as a Special Interest Satellite Symposia.

The 2023 conference theme is “Coming together for HPV elimination” and through workshops, invited lectures, and oral and poster sessions presenting the latest research results, the conference will cover papillomavirus (PV)-related topics from basic science to global health impact. We will be paying special attention to HPV prevention and control in populations that are most vulnerable to HPV disease worldwide, including those in Low- and Middle-Income Countries.

Chairs and Speakers should be asked by the Proposer if agreeable to be part of this session, with a clear indication that this is a proposal at this stage (not yet approved by IPVC Committee). All session proposals will be reviewed by the IPVC 2023 Scientific Committee. Only the Proposer will receive a notification on the results of his submission. The proposer is responsible for communicating the result to all other Chairs and Speakers.

To provide a recommendation, please submit your Special Interest Satellite Symposium Proposal by using the button

below.
