

Program Topics

In line with the IPVS mission of addressing the most recent advances across the spectrum of PV research, Conference topics will include:

- Expanding scientific knowledge to benefit the whole community
- Prevention of HPV infection and their associated diseases and cancers especially cervical cancer
- The epidemiology and molecular biology of PVs
- Animal models for the study of papillomavirus disease
- Basic immunology and pathogenesis of PVs
- Therapeutic and prophylactic vaccines
- Changes in screening and HPV vaccination in Japan

Our overarching theme will be “Translation of research, new discoveries and education into clinical practice and public health to eliminate HPV and related diseases globally.”
